

LET OUR TECHNICAL SKILLS PROVE
TO BE YOUR BEST ADVANTAGE

About Us

We are an established Building Services Design support team based in Gdansk, Poland. Our experience in working to some of the highest construction standards in Europe and the UK, we feel we are uniquely placed to deliver to clients a variety of design services related to the Building Services sector.

HVAC-Projekt today employ a dedicated team of fully trained, highly technical engineers and designers who have gained much of their experience from working on projects within United Kingdom and Europe. We are equally committed to provide single service elements or delivering a fully complete technical project to suit the client's needs.

HVAC-Projekt scope for complete services design is as follows:

- Ventilation and Smoke Ventilation Systems,
- Air Conditioning and Refrigeration Services,
- Chilled Water Systems,
- Heating Systems,
- Process Water Installations,
- Natural Gas Supply Systems,
- Specialist Medical Gases,
- Compressed Air,
- Above Ground Drainage Systems,
- Rainwater Installations,
- Swimming Pool Water Treatment Plant and Piped Services,
- Fire Protection,
- Electrical Services including:
 - Lighting Design and Lighting Controls, Emergency Lighting,
 - CCTV and Access Security Control, Disabled Alarm Systems,
 - Data and Communication Installations.

SINCE 2003, WE HAVE PROVIDED OUR CUSTOMER THE HIGHEST QUALITY OF SERVICE IN DESIGN SUPPORT FOR RELATED MECHANICAL AND ELECTRICAL, AIR CONDITIONING AND PUBLIC HEALTH SERVICES.

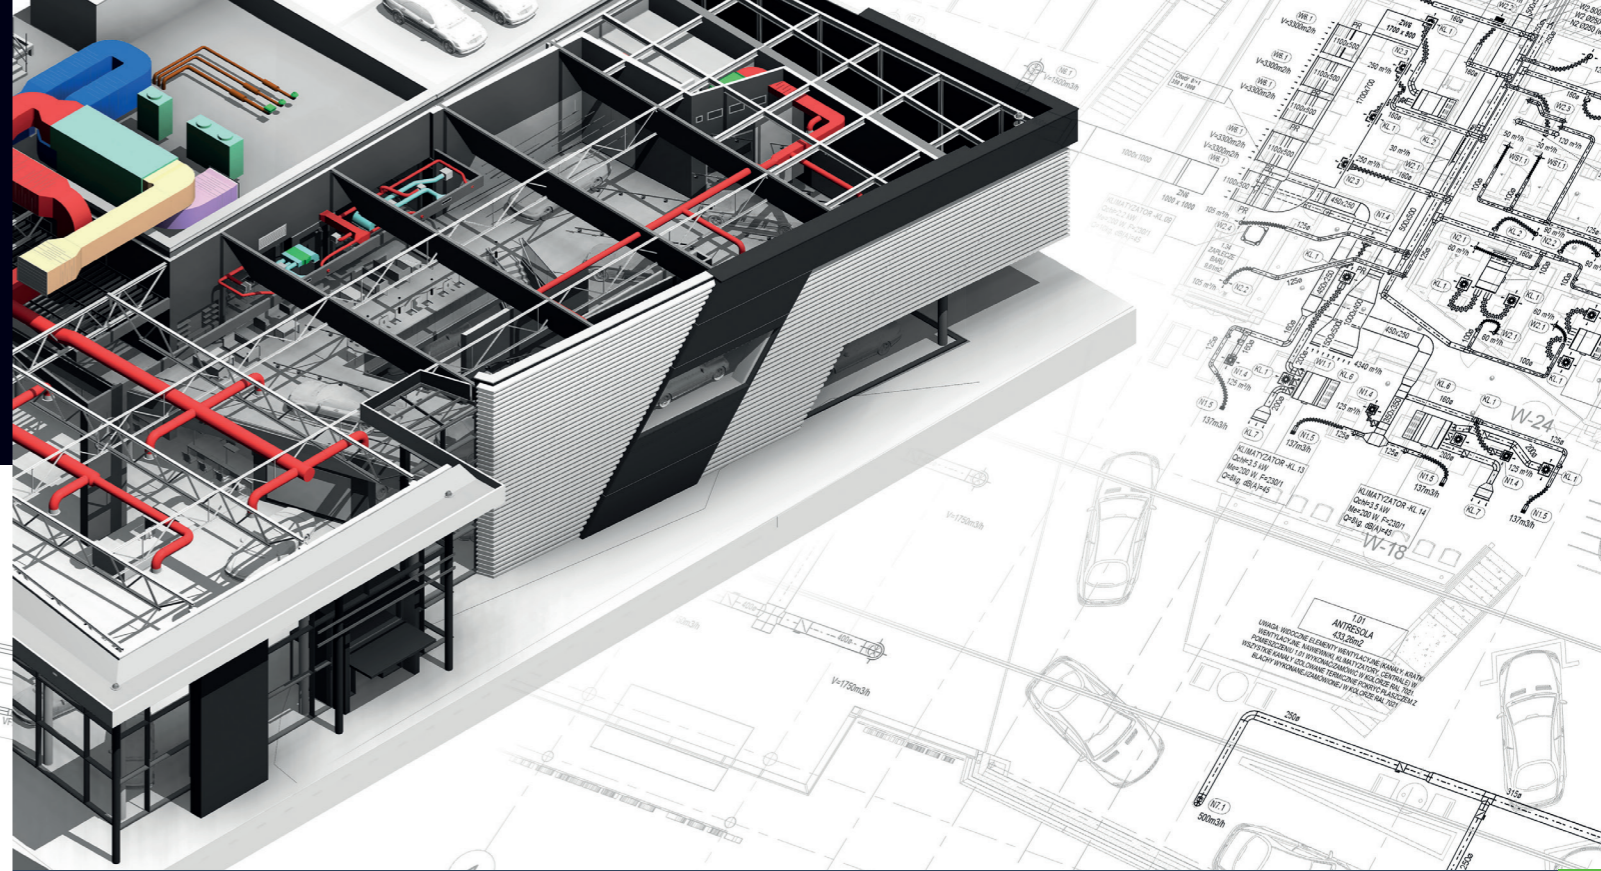

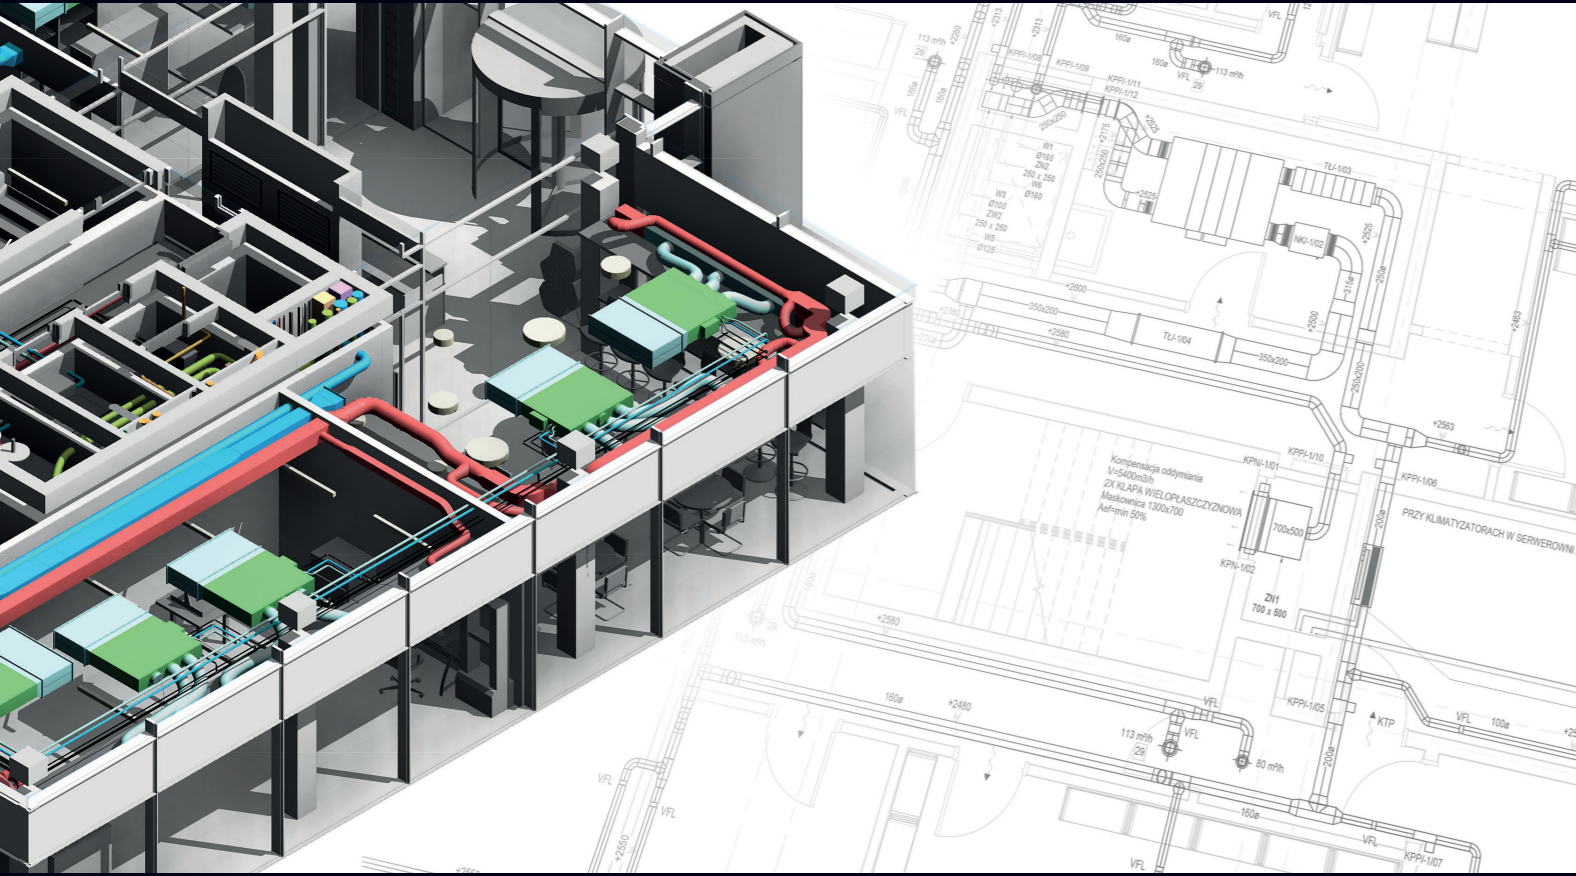

Our in-house designer engineers are fully conversant in the use of design software, such as AutoCad, MagiCad, Revit, Amtech. BIM (Building Information Modeling) of

projects has been a standard feature of our operations for over four years, well in advance of the UK Government's planned implementation for design projects from 2016.

BIM Skills

Building Information Modeling is more than just software, digital modeling, design and modeling, but above all a collection of information in a single, consistent model from concept creation through the exploitation for demolition. For the last ten years our company has been

successfully providing BIM services for the building industry based on the latest technologies and modeling tools such as CADmep, CADvent, Autodesk Revit MEP and MagiCAD. For the creation of fully coordinated models, we use tools such as Navisworks and BIMvision.

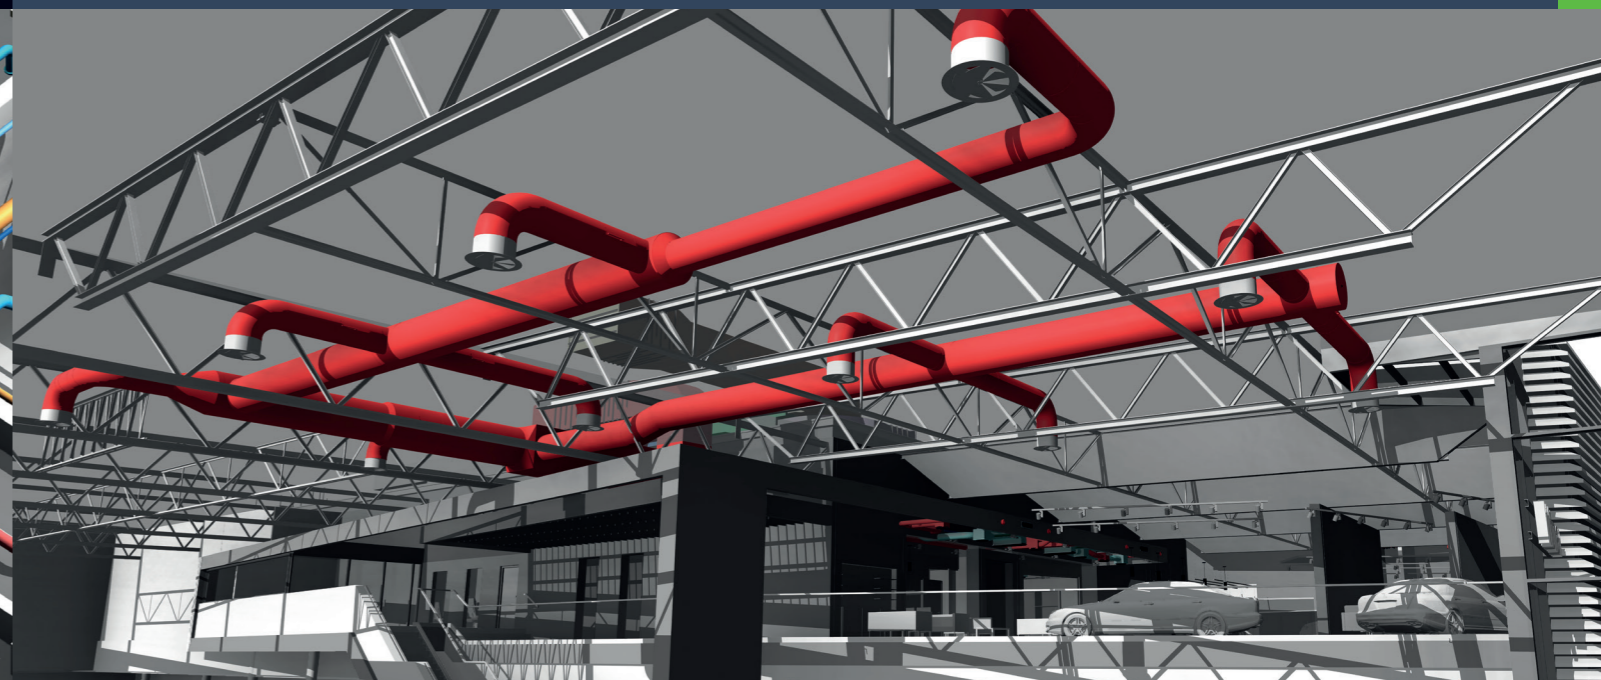

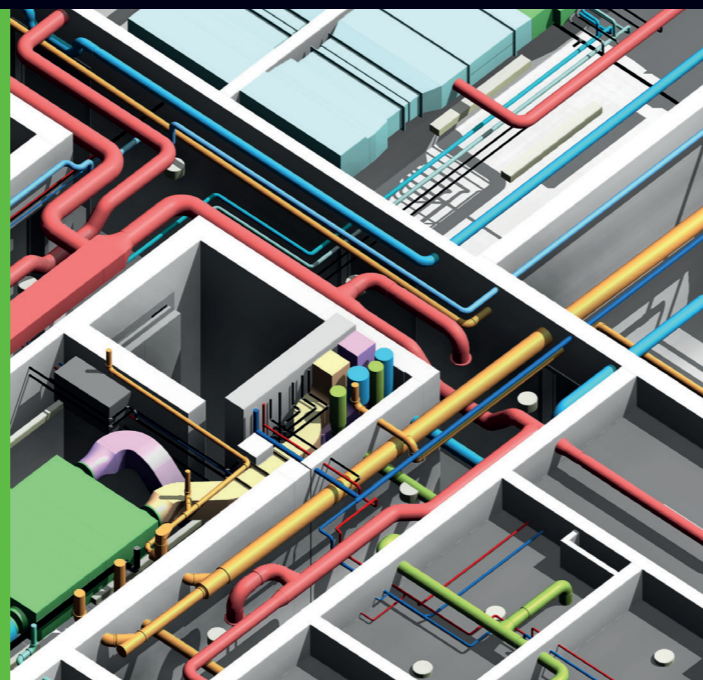

HVAC-Projekt The Benefit To You

Many of today's projects give rise to the advantages of talent and expertise of professionals from many different parts of the world. With the increasing use of social media formats like Skype, FaceTime, LinkedIn inside professional circles more and more associations with worldwide partners are now much easier to establish and maintain.

The combination of skills and shared technical knowledge between companies of common interests, from across Europe in particular, has been of long standing benefit for many in the manufacturing sector of Building Services Industry.

BIM is increasingly used in a variety of methods. Within our company, BIM technologies are used for to assist in project planning, designing and post construction for managing and maintenance of the buildings. We have specialist in the design and documentation presentation for site wide infrastructure services and networks associated with the utility providers.

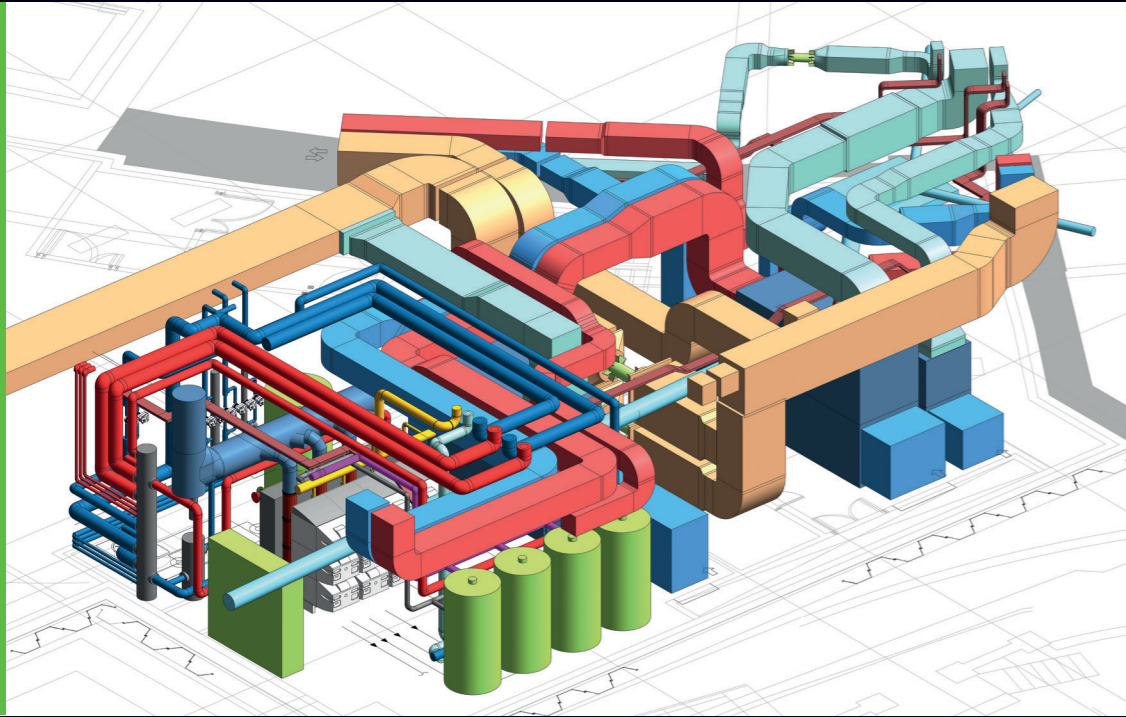

The constant and continued use of BIM technology in our studio brings measurable benefits to the team and to our Clients.

Save Time & Reduce Budgets

Looking to secure the services of someone of the right caliber and attributes can be an arduous and costly task. The very good experienced engineers and designers are not actively seeking to move. The attractive salaries and excellent company benefits, have to be offered to get those professionals even mildly interested. With office integration and in-house training, a work station, laptop and mobile phone, can almost double your outlay.

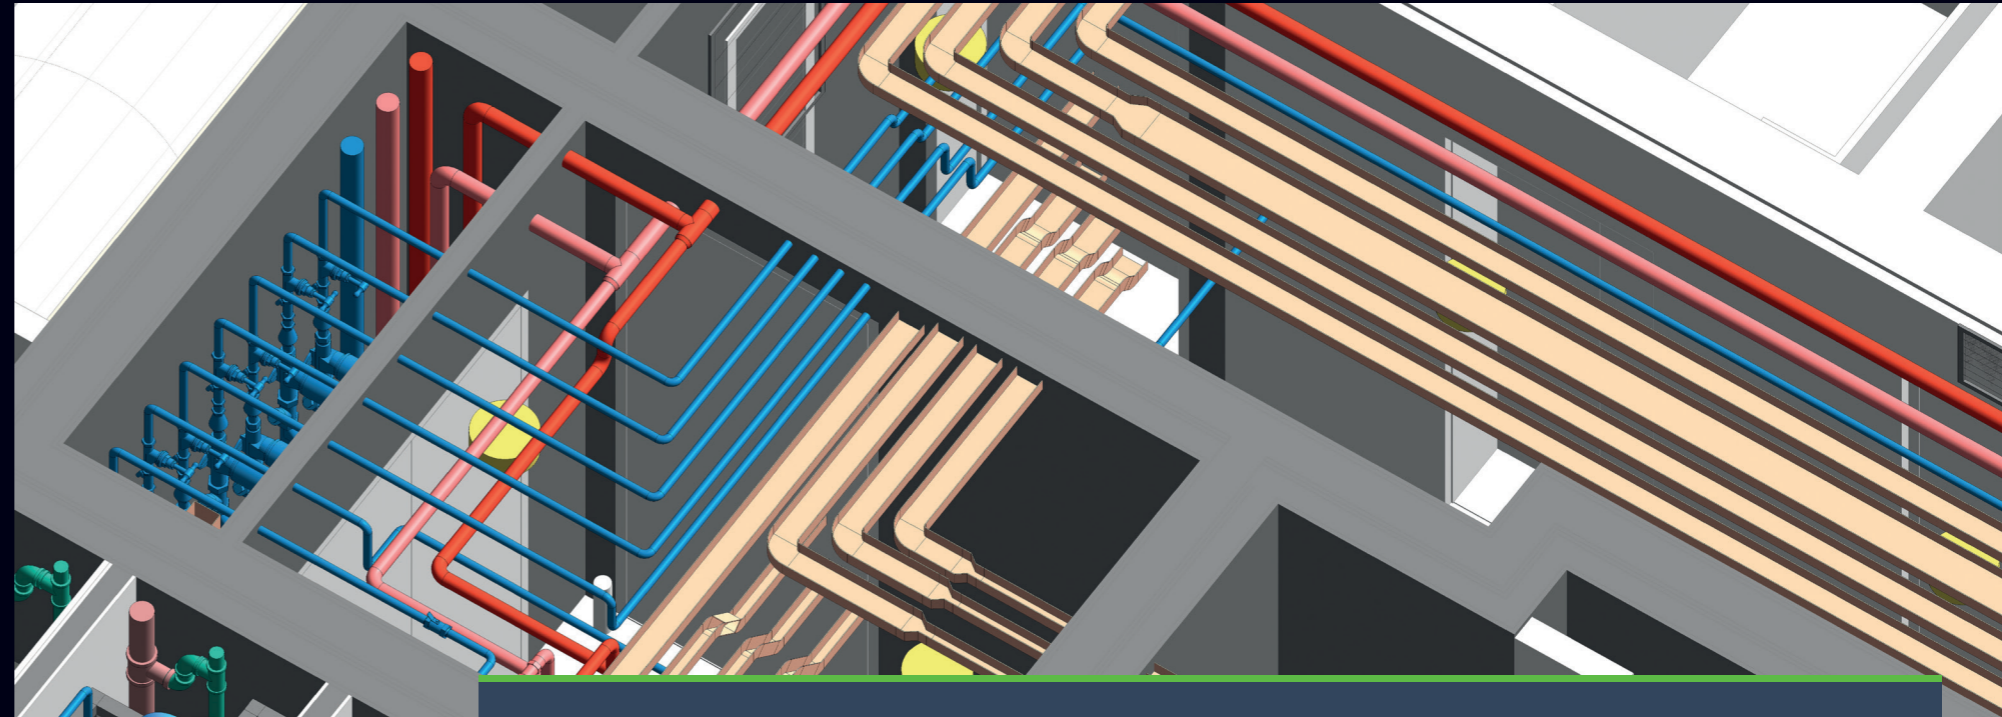

In today's market one can be considered extremely lucky to acquire a quality resource quickly. It is often a lengthy recruiting processes. Which may potentially lead to an uncomfortable long term affect. The additional work load which undoubtedly will be put your existing team, risks maintaining their performance, while your valued clients confidence in the expected levels of service could start to wane.

Better Resource Planning

HVAC-Projekt could be that short stop-gap' solution or the long term association that eliminates those issues completely. Our industry prides itself in problem solving and often is encouraged to think 'outside-the-box', where the challenges need innovated resolutions. The more

than capable team here at HVAC-Projekt are certain in providing developers, consultants and constructors a host of favourable options and can be tailored to either their immediate or future needs.

References

The measure of our success is the great number of satisfied customers, which has been growing bigger and bigger since the establishment of our business. We enjoy the support of satisfied clients who recommend our services to others.
